

Mitchelle Ayanda Mzolo

Full-Stack Engineer

Gauteng, South Africa | +27 71 849 8044 | ayandamzolo11@gmail.com

Portfolio: ayandamzolo.github.io | LinkedIn: linkedin.com/in/mitchelle-mzolo-4a87b11b5 | GitHub: github.com/ayandamzolo

Professional Summary

Full-stack engineer building and securing production systems across fintech, telecoms and travel. Lead developer on a multi-tenant mortgage platform integrated with 6 South African lenders. Strongest at diagnosing hard production failures and fixing them at the root.

Technical Skills

Backend: PHP, Laravel, Python, REST APIs, webhooks, SOAP, queues, multi-tenancy

Frontend: Vue.js, Inertia.js, Ziggy, TypeScript, Tailwind CSS, Blade

Data: MySQL, PostgreSQL (materialised views, plpgsql, row level security), Supabase, Redis, MinIO, MeiliSearch

Cloud and infrastructure: AWS (ECS, S3, IAM, VPC, Lambda, CloudWatch, Transfer Family), Terraform and CloudFormation (infrastructure as code), Redshift, DMS, Docker, Linux, NGINX, PHP-FPM

Security: multi-tenant MFA and OTP, WAF and rate limiting, penetration test remediation, audit logging

AI: Amazon Bedrock

Testing and delivery: Pest, PHPUnit, Cypress, GitLab CI, GitHub Actions

Experience

Junior Software Developer | Blue Bean Software

Nov 2025 - Present

Multi-tenant mortgage origination platform

- Lead developer and platform owner across 2 countries and 6 lenders; authored 828 of 968 commits.
- Migrated bank submissions to a new vendor with zero resubmissions of in-flight applications.
- Traced 64% of production 5xx errors to a faulty nightly job and removed it, closing a security gap.
- Diagnosed the out-of-memory crashes behind recurring 502 errors and right-sized PHP-FPM and NGINX.
- Built AI document extraction on Amazon Bedrock, now in production, auto-filling loan applications.
- Secured the platform with multi-tenant MFA, WAF rules and rate limiting, and remediated penetration test findings.
- Designed secure SFTP partner data exchange on AWS Transfer Family.
- Authored 8 production post-mortems and the platform's operational runbooks.

Internet provider

- Built a WhatsApp payment recovery bot end to end as sole developer, backed by 279 automated tests.
- Built the executive KPI dashboard in Vue 3, TypeScript and Supabase.
- Extended the commission system with a self-service campaign simulator and duplicate order prevention.

Full-Stack Developer | Hit The Road Today

Aug 2024 - Jul 2026

- Sole developer of the promotion and discount engine for a travel booking platform, including refunds on modified trips.
- Delivered Laravel and Vue.js features, production fixes and backend optimisation.

Junior Web Developer | Umuzi Academy

Aug 2023 - Aug 2024

- Built frontend applications and Node.js REST APIs with PostgreSQL in agile teams.

Projects

- **Persona ZA** (persona-za.netlify.app): synthetic South African identity generator for safe form testing.
- **BillWell** (billwell.netlify.app): browser-based invoice generator producing A4 PDFs.
- **ModernTsonga** (moderntsonga.netlify.app): reference site for Xitsonga phrases, proverbs and oral tradition.

Leadership

- Mentor, Gaming 4 Girls Hackathon (Umuzi and UNICEF, 2023): guided a team to 2nd place.

Education and Certifications

- AWS Certified Cloud Practitioner (CLF-C02), 2026
- University of South Africa, National Diploma: Information Technology, 2025 - Present
- Umuzi Academy, National Certificate: IT Systems Development (NQF 5), 2023 - 2024
- Tshwane University of Technology, National Diploma: Information Technology (incomplete)
